Many people modify their Harley-Davidson engines—and find the results disappointing. What they might not know—and what this book teaches—is that emphasizing horsepower over torque, the usual approach, makes for a difficult ride. Author Bill Rook has spent decades perfecting the art of building torque-monster V-twin Harley engines. Here he brings that experience to bear, guiding motorcycle enthusiasts through the modifications that make a bike not just fast but comfortable to ride. With clear, step-by-step instructions, his book shows readers how to get high performance out of their Harleys—and enjoy them, too.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even

explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

The one job that even the best mechanics avoid is wiring. Those worries

are now over with help from the revised edition of "Advanced Custom Motorcycle Wiring." This book uses Chapter One to cover the basics of DC electricity and Chapter Two to explain batteries, starters, and alternators. It goes on to cover the schematics and factory harnesses for both early and late-model Harley-Davidsons. Jeff Zielinski, owner of NAMZ Custom Cycle Products and wiring harness and component designer, is the author of this revised Motorcycle Wiring book. In addition to a discussion of factory Harley-Davidson wiring harnesses, Jeff describes at length the various harness options available to a person building a custom bike. Is it better to build a harness from scratch, or install a ready-made harness kit? What's the easiest way to route all those wires

through the top frame tube and the handle bars? These questions and many more are answered in this book. Inside you will find over 350 color photos and wiring illustrations spread across 144 pages. Everything from basic chopper wiring diagrams and schematics to complex factory schematics - as well as a complete, start-to-finish harness install sequence.

. "Loonix and the Big Experiment" is about the crossing of paths of a kitten and an eccentric professor. Their initial encounter is chaotic and frenzied, but it isn't long before the Professor begins to see their happenstance as destiny. It is a meeting of the most unexpected, and unwanted, of characters that quickly evolves into a relationship that fills both of their lives with joy, love, and excitement.....and lots of it! The kitten enters the Professor's life at the most inconvenient time, a time in which the Professor is hard at work on an

experiment that could alter the course of humanity. The last thing he needs is a needy, mischievous kitten! Adventure and excitement exist at every turn of their relationship, but as their relationship grows, so does the Professor's conviction that this little kitten arrived in his life for a reason. Just when you think things cannot get any more chaotic, the Professor's experiment leads him to the discovery of otherworldly travels and new dimensions, and a new chapter of heightened adventure begins. The story takes us on a journey of discovery, new worlds, and expeditions through unknown cosmic dimensions. More importantly, however, Loonix and the Professor take us with them through these journeys, and the journey of the

joining of their hearts!

For Harley-Davidson aficionados, the very name Sportster conjures an image of a fire-breathing mechanical beast scorching the world's tarmac image the Sportster itself often does not live up to. Straight from the factory, in its standard form, the Sportster routinely proves an entry-level motorcycle providing a relatively tame ride. This book aims to change all that and to show every Sportster rider how to free the beast in his or her bike. With expert, detailed advice on the proper mechanical massaging and plenty of helpful diagrams and photos this updated, third edition of Buzz Buzzelli's best-selling handbook shows how the

Sportster can be transformed into the superbike of old. Including a history of the Sportster from its birth in 1957 to the recent introduction of a new engine (only the third in its long life), this book has everything it takes to open up the gates of hell and give the Sportster its head.

This book analyses the Association of Southeast Asian Nations (ASEAN) as a powerful actor in International Relations by examining how the ASEAN community has evolved, looking specifically at its relationship with the EU with regards to human rights. The book adds to important contemporary debates within constructivist theory, shedding light on the need for 'critical' constructivism that emphasises

language and contestation and what that may entail. On an empirical level, it challenges the idea of an 'EU-centrism,' demonstrating how ASEAN is the major driving force behind its human rights and community aspirations, as well as within the ASEAN-EU relationship. Furthermore, this book engages with the introspection surrounding constructivism by addressing the trouble with 'norms,' and instead unpacking the relationship between ASEAN and the EU to show language power in play. In particular, the book looks at how language, or rather coercive language, helps us 'see'

contestation in action, something that researchers sympathetic towards the idea of ASEAN's 'resistance' have been unable to show through a focus on norms. Tracing the evolution of the ASEAN community and human rights aspirations in a new light, showing how exactly the EU remains an inspiration, but not a model, and more interestingly how ASEAN demonstrates power in the relationship, the book will be of interest to academics working on Asian Studies, European Studies, International Relations Theory and human rights.
