For students, DIY hobbyists, and science buffs, who can no longer get real chemistry sets, this one-of-a-kind guide explains how to set up and use a home chemistry lab, with step-by-step instructions for conducting experiments in basic chemistry -- not just to make pretty colors and stinky smells, but to learn how to do real lab work: Purify alcohol by distillation Produce hydrogen and oxygen gas by electrolysis Smelt metallic copper from copper ore you make yourself Analyze the makeup of seawater, bone, and other common substances Synthesize oil of wintergreen from aspirin and rayon fiber from paper Perform forensics tests for

fingerprints, blood, drugs, and poisons and much more From the 1930s through the 1970s, chemistry sets were among the most popular Christmas gifts, selling in the millions. But two decades ago, real chemistry sets began to disappear as manufacturers and retailers became concerned about liability. The Illustrated Guide to Home Chemistry Experiments steps up to the plate with lessons on how to equip your home chemistry lab, master laboratory skills, and work safely in your lab. The bulk of this book consists of 17 hands-on chapters that include multiple laboratory sessions on the following topics: Separating Mixtures Solubility and Solutions Colligative Properties of Solutions Introduction to Chemical Reactions & Stoichiometry Reduction-Oxidation (Redox) Reactions Acid-Base Chemistry Chemical Kinetics Chemical Equilibrium and Le Chatelier's Principle Gas

Chemistry Thermochemistry and Calorimetry Electrochemistry  
Photochemistry Colloids and Suspensions Qualitative Analysis  
Quantitative Analysis Synthesis of Useful Compounds Forensic  
Chemistry With plenty of full-color illustrations and photos,  
*Illustrated Guide to Home Chemistry Experiments* offers  
introductory level sessions suitable for a middle school or first-  
year high school chemistry laboratory course, and more  
advanced sessions suitable for students who intend to take the  
College Board Advanced Placement (AP) Chemistry exam. A  
student who completes all of the laboratories in this book will  
have done the equivalent of two full years of high school  
chemistry lab work or a first-year college general chemistry  
laboratory course. This hands-on introduction to real chemistry --  
using real equipment, real chemicals, and real quantitative  
experiments -- is ideal for the many thousands of young people  
and adults who want to experience the magic of chemistry.

Arriving, book one of Corinne Jeffery's *Understanding Ursula*  
trilogy, vividly recreates the pioneer world of the Canadian  
prairies with a multitude of memorable characters. You'll lose  
yourself between the pages as you watch them struggle to  
survive and flourish, always at the mercy of Mother Nature and  
the ever-changing seasons on the unfettered plains. On July 1,  
1909, the day after his eighteenth birthday, Gustav Werner takes  
the inaugural ride on the Grand Trunk Pacific Railway between  
Melville and Regina, to apply for a homestead grant at the  
Dominion Lands Office. He is eager to become the most thriving  
homesteader in the townships of Neudorf and Lemberg,  
Saskatchewan, set aside for Gustav's people, the German

Lutherans, by Sir Clifford Sifton in Canada's "Last Best West" land  
deal. What he doesn't realize is that beyond becoming a man and  
a landowner, life as he knows it is about to crumble from his  
grasp. Family drama and conflict plague Gustav as he learns  
English—the language that sparks hatred in his staunchly  
traditional father, Christian—and discovers that his parents have  
arranged his marriage to sixteen-year-old Amelia Schweitzer.

Sharp and tender at once, a humorous take on family  
dysfunction and human weakness seen through a young boy's  
eyes. Max lives with his grandparents in a residential home for  
refugees in Germany. When his grandmother—a terrifying,  
stubborn matriarch and a former Russian prima donna—moved  
them from the Motherland, it was in search of a better life. But  
she is not at all pleased with how things are run in Germany. His  
grandmother has been telling Max that he is an incompetent,  
clueless weakling since he was a child. While he may be dolt in  
his grandmother's eyes, Max is bright enough to notice that his  
stoic and taciturn grandfather has fallen hopelessly in love with  
their neighbour, Nina. When a child is born to Nina that is the  
spitting image of Max's grandfather, things come to a hilarious if  
dramatic head. Everybody will have to learn to defend  
themselves from Max's all-powerful grandmother.

What does it mean to be good? Why do people die? What is friendship? Children enter the world full of questions and wrestle with deep, thoughtful issues, even if they do not always wonder them aloud. Many parents have the desire to discuss philosophical ideas with their children, but are unsure how to do so. The Philosophical Child offers parents guidance on how to gently approach philosophical questions with children of all ages. Jana Mohr Lone argues that for children to mature emotionally, they must develop their desire and ability to think abstractly about themselves and their experiences. This book suggests easy ways that parents can engage with their children's philosophical questions and help them develop their "philosophical selves."
