Written by Stephen Hake, author of the Saxon Middle Grades programs, Saxon Intermediate 3 is ideal for students looking for a textbook approach that provides a smooth transition into Math 5/4. It is also helpful for students who are coming to Saxon from other programs. Math Intermediate 3 teaches mathematical concepts through informative lessons, helpful diagrams, and interactive activities and investigations.

Saxon math programs produce confident students who are not only able to correctly compute, but also to apply concepts to new situations. These materials gently develop concepts, and the practice of those concepts is extended over a considerable period of time. This is called "incremental development and continual

review." Material is introduced in easily understandable pieces (increments), allowing students to grasp one facet of a concept before the next one is introduced. Both facets are then practiced together until another one is introduced. This feature is combined with continual review in every lesson throughout the year. Topics are never dropped but are increased in complexity and practiced every day, providing the time required for concepts to become totally familiar. Each grade level has its own consumable meeting book, which is used during The Meeting at the beginning of each day. This first edition meeting book is for Grade 1.

Physics is equally appropriate for average and gifted students. The entire program is based on introducing a topic to a student and then allowing them to build upon that concept as they learn new ones. Topics are gradually increased in complexity and practiced every day, providing the time required for concepts to become totally familiar.
