American Government textbook, Christine Barbour's *AmGov: Long Story Short*, responds to the needs of today's students and instructors through brevity and accessibility. The succinct ten chapters are separated by tabs that make it easy to skim, flip, revisit, reorient, and return to content quickly. Reading aids like bullets, annotations and arrows walk students through important facts and break up the material in short, engaging bites of information that highlight not only what is important but why it's important. Though brief, this core book is still robust enough to provide everything that students need to be successful in their American Government course. Whether for the on-the-go student who doesn't have time to read and digest a lengthy chapter, or the instructor who wants a book that will stay out of their way and leave room for plenty of supplementary reading and activities, *AmGov* provides a perfectly simplified foundation for a successful American Government course.

The Chainsaw Operator's Manual is an essential safety tool for chainsaw operators. It is the ultimate guide to basic chainsaw operating techniques covering safety, maintenance and cross-cutting, but not tree felling. Detailed diagrams illustrate horizontal, vertical and boring cuts, as well as trimming and cross-cutting techniques. Safety considerations are discussed, including workplace safety, occupational hazards, kick-back and identifying dangerous trees. An explanation of the 'tension' and 'compression' forces in timber is also provided to help you understand where to begin cutting to avoid jamming the

saw. The book covers chainsaw maintenance in detail, explains all aspects of the equipment and helps you select the right chainsaw and personal protection equipment for your needs. Trouble-shooting charts are included to help you solve operating problems. This manual has been updated to take into account the most recent changes in nationally accredited competency standards. Public Works Manual National Geographic Books

Pucker or Puckering is the most used (abused?) term in the garment

manufacturing industry. Pick up any quality controllers report, and the first thing that will strike your eye will be "...Puckering in armhole, ...Puckering in neckline binding, ...control Puckering in bottom hem..." the list is endless. Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the majority of them lay great stress on "inherent pucker" (only material parameters). In this booklet have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh impossible. We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
